

Technical Data Sheet

Technical Data Sheet Ref:UF3000 Issued: 19/07/2024 Number of pages: 4

Expanding Foam White Teq

CHARACTERISTICS

- White polyurethane foam based on purified ingredients.
- > Special composition features convenient curing parameters and characteristic icewhite colour, fine cell structure and enhanced UV resistance.
- Cured foam has excellent thermal and sound insulation properties.
- Moderate curing pressure to avoid frames deformation and high flexibility ensure a long-term good insulation.
- > Product is easily usable and applicable with attached straw applicator.
- ➤ The foam has excellent adhesion on most building materials like wood, concrete, stone, metal etc. Some metal surfaces might need pretreatment to enhance adhesion.
- > Full mechanical strength is achieved in 24 hours.
- Final yield of the cured foam largely depends on working conditions temperature, air humidity, available space for expanding, etc.
- > At minus temperatures the expansion of foam is lower and curing time longer.
- > Product does not contain CFC-propellants.

APPLICATIONS

White Teg can be used for:

- Insulation of window frames
- Insulation of door frames
- > Filling of cavities
- Sealing of openings in insulation materials
- Creating soundproof screens
- Filling of cavities around pipes

calculation purposes.
Yield per can calculation purposes. 750/1000 ml: max 31 L

INSTRUCTIONS FOR USE

Substrate Preparation

Substrates must be stable, clean, and free from dust, loose material, polish, grease etc. Spray water onto porous surfaces (brickwork, plaster, concrete etc.) to ensure full and even curing of the foam (do not spray non-porous substrates eg: painted woods, plastics.) If necessary, protect areas with masking tape.

Application Temperature

- ➤ Working temperature: from +5°C to +35°C.
- > Can temperature: from +5°C to +30°C.
- > Can has preferably to be stored for at least 12 hours in room temperature before commencing with application.

Application Method

- 1) Substrates must be table, clean, and free from dust, loose material, polish, grease, etc. Spray water onto porous surfaces (brickwork, plaster, concrete, etc.) to ensure full and even curing of the foam (do not spray non porous substrates, e.g. painted woods, plastics). If necessary, protect areas with masking tape.
- 2) Store can for at least 12 hours at room temperature before using. Apply between +5°C and +35°C.
- 3) Shake can vigorously before use (15-20 times.) Screw on the applicator nozzle onto the valve.
- 4) Turn can upside down and dispense foam gently by lightly pressing the trigger. Release trigger to stop flow. Fill gap by ½ to ¾ of size because the foam will expand. Work upwards to fill deep cavities in layers. Apply light water spray to increase curing speed. Preferably keep can upside down and shake regularly whilst applying foam.

Limitations

Limitations to joint maximal width exist in regard of ambient temperature and humidity levels.

- In dry conditions (e.g. in rooms with central heating etc.), in order to get best foam structure and foam properties it is recommendable to fill gaps and joints in several layers by the application of smaller foam strings (up to 3 4 cm thickness) and slightly moisturizing between every layer.
- At very dry conditions at low temperatures, heated rooms the foam may be brittle directly after the hardening. This brittleness is a temporary effect and disappears after a while or by warming up. Once the foam is flexible, it does not get brittle again even at cold temperatures.

GENERAL INFORMATION

Storage

Best before 12 months. For longest shelf life avoid storage above $+25^{\circ}$ C and below $+5^{\circ}$ C (up to -20° C for a short period). Always store can with the valve directed upwards. Transportation of odd cans by passenger car: leave the container wrapped in a cloth in the trunk, never in the passengers' compartment.

Packaging

750 ml aerosol can

HEALTH AND SAFETY

Before using the product, please see related Material Safety Data Sheet that is available to download from mymsds.henkel.com.

"The information provided in this Technical Data Sheet (TDS) including the recommendations for use and application of the product are based on our knowledge and experience of the product as at the date of this TDS. The product can have a variety of different applications as well as differing application and working conditions in your environment that are beyond our control. Henkel is, therefore, not liable for the suitability of our product for the production processes and conditions in respect of which you use them, as well as the intended applications and results. We strongly recommend that you carry out your own prior trials to confirm such suitability of our product. f.

Any liability in respect of the information in the Technical Data Sheet or any other written or oral recommendation(s) regarding the concerned product is excluded, except if otherwise explicitly agreed and except in relation to death or personal injury caused by our negligence and any liability under any applicable mandatory product liability law."
